
Test-Driven Development

- ❖ Write a test for a new functionality in your app
- ❖ Run the test – The test should fail
- ❖ Write the code – To make the test pass
- ❖ Run the test – If it passes, you are confident that the code you've written meets the test requirements
- ❖ Refactor code – Re-run the tests every time you refactor the code
- ❖ Repeat

Configuration

- ❖ `pytest, pytest-django`
- ❖ `[pytest]`
`DJANGO_SETTINGS_MODULE =`
`simplecrmtdd.settings`
`python_files = test_*.py *_test.py`
- ❖ <https://pytest-django.readthedocs.io/en/latest/>
